**SPECIFICATION AMENDMENT**

In the specification, at page 9, third paragraph, please make the following underlined addition:

It is also an object of the current invention to achieve a method for producing a static dissipative textile having an electrically conductive surface. The method generally comprises the steps of providing a knitted, woven, or nonwoven fabric, coating one or both sides of the fabric with an electrically conductive coating in a pattern comprised of lines, and drying the fabric. The antistatic component may comprise a graphite-containing material. The fabric may then be exposed to one or more mechanical and/or chemical textile finishing processes known to those skilled in the art.
